Subject: [DMARC Fail] RE: Ag Park Report

As requested, I reviewed the revised lot report. The changes in the text appear adequate, but I agree with Greg that the explanations of 0.23/1.0 in the tables are not very clear (especially if people just read these tables and not the main text). Below are my suggestions:

Table 1: (a) revise Footnote b to "Total PCBs site cleanup levels of 0.23 and 1.0 mg/kg are the remedial goals approved by Department of Toxic Substances Control (DTSC) on August 2006 and January 2018, respectively." (b) revise Footnote d to "For soil down to 10 feet in depth, a remedial goal of 0.23 mg/kg was used; for soil depth 10 feet or deeper, a remedial goal of 1.0 mg/kg was used."

Table 2: Change the last two notes to "No further action. Result is ≤ 0.23 mg/kg." and "No further action for soil depth 10 feet or deeper. Result is < 1.0 mg/kg."

Please let me know if you have questions or additional thoughts.

CY

These changes incorporate all of the data so I am good....maybe have a look at how the 0.23/1.0 separation is handled,...particularly in table

Greg/Maryam,

Attached is a draft revised Ag Park lot report for Lot 22 sans lab reports. Text that changed is highlighted in yellow. Please review at your earliest convenience.

Regards,

Ross Surrency, PG
